GLADIOLUS, DAHLIAS, IRIS, PEONIES AND OTHER PERENNIALS

All orders of \$1.50 or over from this list postpaid in U. S.

DISCOUNTS: Orders of \$2.00 or over will receive 10%; \$10 and over 15%, and \$25.00 and over, 20% extra on gladiolus, excepting collections on which we give extra count.

THRIPS

All glad bulbs should be disinfected as thrips or their eggs may be destroyed easily by the following methods:

Napthalene flakes scattered among the bulbs, 1 oz. to each 100 bulbs, covering bulbs with heavy papers or enclosing in tight paper bags. This should be done after bulbs are cured (five or six weeks after digging). Allow flakes to remain three weeks and then remove bulbs and keep in cool temperature, 5 or 10 above freezing.

Fumigation can be done three or four weeks before planting, providing bulbs are stored in cool place during the winter.

Soaking should be done just prior to planting. Any of the following solutions help prevent disease and also destroy bugs and eggs:

Bichloride of Mercury, $\frac{1}{2}$ oz. to 4 gals. water, soak three hours.

Common lye, 1 can to 20 gals., or one tablespoon to each gallon of water, soak six to eight hours.

Dissolve ingredients in a little hot water then mix well in cold water.

The above should not be used in metal containers as they corrode metal.

Spraying may be done with following: 2 lbs. brown sugar, 2 tablespoons paris green, 3 gals. water. Spray when plants are 1 ft. high and once weekly until buds appear.

Our bulbs are disinfected, and be sure yours are.

If interested in large plantings we can furnish bulbs at wholesale. Let us know your wants. We also have several varieties not on list. If there are special varieties you want, let us know.

Gladiolus will grow in almost any soil, but not so well near trees or too near buildings. They like lots of sun and a well drained soil. If your ground is rich do not use much fertilizer. Bone meal and sheep manure are very good lightly raked in the soil after bulbs are planted.

Gladiolus can be planted in a trench 7 or 8 inches wide in a double row from 2 inches apart or more, according to space and number of bulbs you wish to plant. Plant bulbs about 5 or 6 inches deep in light soil or about 4 inches in heavy soil and the small bulbs from 3 to 4 inches. Keep the weeds out and cultivate often as you want to, as they like it. Your reward will be finer flowers.

Cut the flowers when first blossoms show and by changing the water daily and removing withered blossoms they will keep a week or more. Be sure in cutting the blooms to leave 4 or more leaves on the plant to mature the bulb.

Dig the bulbs when the leaves turn brown, cut tops and dry for a few weeks; then remove old bulbs and root and store until planting time in cool, dry room or cellar, but be sure they do not freeze.

GLADIOLUS LIST

Plan to have some of these in your garden.

	Each	Per 10
ALTON IMPROVED, large, much ruffled salmon, with many flowers open	.25	
AIDA, tall, early, dark blue.....2 for	.12	.50
